CRESCENDO STATEMENT AMPLIFIER STAND

Unleash the Potential of Your Power Amplifier

The **AG Lifter Crescendo** Amplifier Stand is our ultimate design based on the proven **Crescendo** Audio Isolation Rack. To take full advantage of your **AG Lifter Crescendo** Amplifier Stand the frame design allows the adjustment of each isolation foot for the architecture of the power amplifier placed on the stand. This adjustment pays dividends to the overall end performance of the amplifier stand.

The racking frame is constructed from proprietary designed aluminium extrusion (ISO 9001) and anodised in silver or black satin durable finishes. Match anodised billet aluminium caps are permanently pressed into the vertical pillars. This quality of manufacture has allowed **AG Lifter** to offer a lifetime frame warranty. Custom frames may be ordered for any dimension of power amplifier or mono power amplifiers.

AG Lifter Dulcet 19 and **Dulcet 20** Isolation Feet are standard on the **Crescendo** Amplifier Stand to mitigate resonance. This provides a dual layer of isolation under the stand and under the equipment shelf.

An attractive CNC machined 20mm acrylic top shelf supports the amplifier, the finished size of the shelf may vary for custom builds.

The overall sound is natural and has a wide open soundstage, while retaining weight and clarity through the whole frequency range.

SPECIFICATIONS

- Proprietary designed aluminium extrusion
- Billet aluminium caps
- Durable matched anodising
- Choices of Silver or Black Satin Anodised finishes
- Etched graduations to make equal frame adjustments easy
- Factory tool supplied for easy setup
- Dual **Dulcet** isolation feet technology
- Upgradable to **Dulcet Gold** Isolation technology
- Adjustable isolation system design
- CNC machined 20mm acrylic shelf
- Nitrile bearing technology
- Lower noise floor
- Open and spacious musical presentation
- Sounds natural and life like
