## **Gold Series Isolation Technology:**

This is our ultimate creation. AG Lifter has released the **Gold Series isolation feet technology**. This isolation foot incorporates billet brass CNC machined upper and lower components and a revised rubber centre section. This is a no expense spared high performance build; some raw materials are five times the cost of the standard foot. Why did we do this, simply because it produces better music! A clearer, tighter and more detailed sound, particularly midrange resolution, very natural tones and textures, sound staging is scaled to size and show's exceptional depth of field layering the instruments, while retaining excellent bass response.

A uniquely formulated clear coat is applied to the brass components of the **Dulcet 19 Gold isolation feet** before assembly. The clear coat comprises of a two-pack epoxy clear primer with fine gold metal flakes and UV additives for a highly presentable and a highly durable finish.

**Dulcet 20 Gold:** The **Dulcet 20 Gold isolation feet** can be used individually for audio components on furniture with an operating range exceeding 20kg. The effective load rating for the **Dulcet 20 Gold Isolation Feet** is suited to heavy weight audio components such as Power Amplifiers, Power conditioners/regenerators etc. The **Dulcet 20 Gold Isolation Feet** are the foundation of all **AG Lifter** isolation racks.
