AG LIFTER CRESCENDO H-FRAME MODULE

Unleash the Potential of your Audio

The **AG Lifter Crescendo H-Frame** module fits on-top of the **Crescendo Modular Rack** and is the ultimate design based on the proven **AG Lifter Crescendo** Audio Isolation Rack. An extra layer of decoupling and isolation is now available for your premium source components. The **AG Lifter Crescendo H-Frame module** allows adjustment to tension the rack frame to provide fine tuning sonically. This adjustment pays dividends to the overall end performance.

The utility of the **Crescendo H-Frame** allows the use in or on furniture as a standalone module, now your equipment can be isolated inside your special furniture. All you need is the addition of **Dulcet 20 Isolation Feet and a Shelf**. Please ask your dealer for pricing details.

The **AG Lifter** frame is constructed from a proprietary designed aluminium extrusion (ISO 9001) and anodised in silver or black satin durable finishes. Anodised billet aluminium caps are permanently pressed into the vertical pillars. This quality of manufacture has allowed **AG Lifter** to offer a limited frame warranty.

AG Lifter Dulcet 19 isolation feet are standard on the **Crescendo H-Frame** to mitigate resonance for some turntable designs and especially for analogue or digital electronics.

REF 70 bearings are recommended for turntable/amplifier applications either on top the **Dulcet Isolation** feet or the **Pillar Caps**; please ask **AG Lifter** or your dealer for the correct configuration.

The overall sound is natural and has a wide-open soundstage, while retaining weight and clarity through the whole frequency range.

AG Lifter H-Frame SPECIFICATIONS

- Proprietary designed anodised aluminium extrusion
- Billet anodised aluminium caps
- Choices of Silver or Black Satin Anodised finishes
